Nintendo's white PlayStation 4 debuts

Pac-Man also returns as a character in new version of 'Super Smash Bros.' game.

BY PARESH DAVE

Here's a look at the big logos buzzing across the vast exhibit space on Day 2 of the three-day E3 video game industry show, being held at the Los Angeles Convention Center.

White PlayStation

Convention-goers have taken their first look at Nintendo's "glacier white" PlayStation 4. The white console is being bundled with the game "Destiny," a new title from Bungie Inc., developer of the blockbuster "Halo" series.

Bungie launched "Halo" while the firm was under the ownership of Microsoft. Since spinning off on its own in 2007, the Bellevue, Wash., company has been searching for a new hit and teamed on "Destiny" with Santa Monica publisher Activ-

...serves as another nudge for Nintendo fans holding off consoles to upgrade to the Wii U, which has seen weak interest since launching in ...

Ubisoft and women

Why doesn't the seventh version of the "Assassin's Creed" series, "Unity," feature any female assassins?

Because it was too much extra production work to include women, developers told the gaming news websites Polygon and Videogamer.

The news prompted the latest round of criticism of the video game industry for underrepresentation of women in games or its portrayal of women when they do appear.

"Unity," designed by Ubisoft, features a main character working with assassins "to expose the true powers behind" the 18th century French Revolution. The game is being heralded this week for including a cooperative multiplayer mode for the first time. The game launches Oct. 28 for PlayStation 4, Xbox One and Windows computers.

Allowing users to take control of, say, a team of female assassins would have required double the work, Ubisoft creative director Alex Amancio told Polygon.

"It's double the animations, it's double the voices, all that stuff and double the visual assets," Amancio

a heroine was not included because "the history of the American Revolution is the history of men."

Sony: Winner?

Some analysts and members of the video-gaming media are calling Sony the "winner" of E3 for pushing forward with plans to build a PlayStation ecosystem that involves access to the same games and content across

...house on all types of devices.

In an extended interview with Edge Online this week, Sony's Andrew House explained how the company was adjusting marketing for the PlayStation Vita, which has faced a "challenging" environment outside of Japan.

A recent PricewaterhouseCoopers report on the industry said Vita sales saw an uptick when the PlayStation 4 was released last fall, but that "Sony's dedicated portable consoles continue to struggle against both Nintendo and smartphone and tablet gaming." And even then, Nintendo has had to slash sales forecasts for its 3DS portable gaming device.

Smartphone, tablet and online gaming remain the fastest growing areas, with combined mobile and online gaming revenue on pace to surpass combined revenue from the traditional PC and console-game sectors in 2014, according to the report.

...House, the chief executive of Sony Computer Entertainment, acknowledged that the Vita is one of an ecosystem that PlayStation 4 users will be able to tap into. People can use the Vita when someone wants to use the big television screen, he said. It's a similar point for the Nintendo Wii U, whose controller has a screen that can be used for gaming when the television is turned to something else.

But House also said the ... has had success persuading ... mobile app developers ... build games for the Vita.

"It's becoming a very ... credible and easy ... for independent developers ... those who have had success in the mobile ... and now want to ... games that are that ... richer, that have ... dedicated gaming ... face," he said. "A ... certainly seeing ... embraced by that ... ty very strongly."

L'E3 2014 a eu raison de nombreux journalistes et notamment de leur santé mentale. Il faut dire que les annonces ne manquaient pas, au point même de retourner le cerveau de certains.

La bourde, la boulette, la bévue… Cela arrive aux meilleurs et dans la précipitation le LA Times a bel et bien annoncé une PS4 éditée par Nintendo. C'est un peu comme si nous annoncions que l'iPhone 6 allait sortir des usines de Microsoft.

D'ailleurs il s'agit d'une erreur amusante, le reste de l'article parlant conformément de son réel papa, Sony. Mieux vaut en rire ! Vous savez quoi, au point où on en est « Nintendo présente la nouvelle PS4 blanche en exclu avec le cinquième jeu Halo et fonctionnant sur SteamOS ».

C'est tout de même à se demander si ce n'est pas un canular…

#sionpeutplusrigoler.
